Two padlocks for your data. (AT&T Secure Communications Systems' SecretAgent 3.0 and DataMedia's SecurExchange 2.0) (Network Edition: First Looks) (Software Review) (Evaluation)

Feb 7, 1995

WORD COUNT: 695 LINE COUNT: 00055

ABSTRACT: Two encryption utilities take data security beyond mere password protection into the realm of public key cryptosystems and digital signature verification. AT&T Secure Communications Systems' SecretAgent 3.0 is easy to use and encrypts E-mail messages using the RSA public key encryption method. Digital signatures can also be attached to network files with SecretAgent for additional security. SecretAgent is priced from \$149.95 to \$249.95 per user, depending on the number of users. DataMedia's SecurExchange 2.0 offers public and private key RSA encryption for E-mail and manages public keys with the X.509 public key certificate standard. However, SecurExchange is less flexible and easy to learn than SecretAgent. SecurExchange's price starts at \$495 for 10 users.

Package offers PC-based security for remote data transmission. (Mika L.P.'s
Whisper communications system) (product announcement)
 Feb 20, 1989
 WORD COUNT: 487 LINE COUNT: 00039

ABSTRACT: Mika L.P. begins shipping Whisper, a remote data communications hardware-software package that includes a built-in Hayes-compatible modem and offers a high degree of data security. Whisper encrypts data as it is being sent over the microcomputer's serial communications port and unscrambles it as it is being received. Hardware adheres to the National Bureau of Standards' Data Encryption Standard (DES) security technique. Additional security is provided by Whisper's Message Authentication Code (MAC), a user- **activated** , eight-digit access code that must be **decoded** on the receiving end before the file can be unscrambled. Whisper's advantage is that secure data communications with DES is a one-step process, not requiring users to first encrypt or scramble a file using DES hardware and then store it to disk before transferring it over telephone lines. Whisper sells for \$395.

Tales from the encrypt. (Symantec's Norton Your Eyes Only encryption and
access-control software for Windows 95) (Software Review) (Evaluation)
 Nov, 1996
 WORD COUNT: 1073 LINE COUNT: 00085

ABSTRACT: Symantec's \$89.95 Norton Your Eyes Only encryption and access-control software for Windows 95 was called DiskLock in its previous incarnation, when it emphasized locking hard disks and preventing access to specific directories. The new version shifts focus to encryption of the files to make them inaccessible to unauthorized users. The BootLock and ScreenLock functions prevent access to a computer left unattended: the former requires entry of a password upon bootup, even from a floppy; and the latter requires a password to unlock the screen once a screen saver has been activated. Folders selected in the Windows 95 Explorer can be designated as SmartLock folders to ensure that files copied or moved to the folders are encrypted automatically. SmartLocked files are opened by authorized users the same as any other files, and decryption is transparent. The combination of locking and encryption raises the level of security available to PC users.

New Products: Vela Research's CineView Brings MPEG-2 Video to PC Screens

November 1997

WORD COUNT: 219

TEXT:

Vela Research Inc. is shipping CineView, a PCI-based plug-and-play MPEG-2 decoder board designed to deliver broadcast-quality video to desktop PC users. CineView features MPEG-2 decoding direct to a PC VGA monitor, and an NTSC or PAL monitor (optional). This half-length PCI board is designed for distance learning, computer-based training (CBT), video on demand (VOD), near video on demand (NVOD), point of sale (POS), point of interest (POI), and any other application that requires broadcast-quality video on the PC. In addition to standard **decoding** via pull technology, a **key** feature of CineView is push technology, or the ability to receive data as a client without requesting it when operating in a client/server environment. Decoders typically rely on a pull technology whereby the decoder pulls MPEG data from a local hard drive or other media where the file is stored. CineView allows the developer to design an application that "waits" for video to be pushed or broadcast to the decoder via an Internet, Intranet, LAN, or WAN. When CineView senses the networked broadcast video, the **decoder** is **activated** for immediate playback without user intervention. CineView **decodes** MPEG-I and MPEG-2 system, program, transport, audio-elementary, and video only streams at 30 frames per second at SIF and 60 fields per second CCIR-601 resolutions. CineView is a Windows 95 and Windows NT-based decoding environment.

07965249 INSPEC Abstract Number: B2001-08-6120D-006, C2001-08-6130S-016

Title: Networked cryptographic devices resilient to capture

Publication Date: 2001

Document Type: Conference Paper (PA)

Treatment: Practical (P)

Abstract: We present a simple technique by which a device that performs private **key** operations (signatures or **decryptions**) in networked applications, and whose local private **key** is **activated** with a password or PIN, can be immunized to offline dictionary attacks in case the device is captured. Our techniques do not assume tamper resistance of the device, but rather exploit the networked nature of the device, in that the device's private key operations are performed using a simple interaction with a remote server. This server however, is untrusted-its compromise does not reduce the security of the device's private key unless the device is also captured and need not have a prior relationship with the device. We further extend this approach with support for key disabling, by which the rightful owner of a stolen device can disable the device's private key even if the attacker already knows the user's password.

Descriptors: authorisation; cryptography; distributed processing

Identifiers: networked cryptographic devices; private key operations; signatures; decryptions; networked applications; password; offline dictionary attacks; tamper resistance; remote server; data security; key disabling; cryptography

Class Codes: B6120D (Cryptography); C6130S (Data security); C1260C (Cryptography theory); C6150N (Distributed systems software)
